# Subject Index

Acceleration of breakage rates
of anthracite during grinding in a ball mill, 227
Adsorption of polyacrylamides
charge effects of, on sodium kaolinite and its flocculation, 77
Aerokinetic canals
modelling the operation of, 209
Analysis of gas flow
through erupting bubbles in a gas-fluidized bed, 45
Anthracite
acceleration of breakage rates of, during grinding in a ball mill, 227
Automated cascadograph particle analyzer
particle sample shape description with, 271

Ball mills
acceleration of breakage rates of anthracite during grinding in, 227
effect of fluid medium density on torque, energy distribution and grinding kinetics in, 217
Beta distribution function
description of normal, log–normal and Rosin–Rammler particle populations by a modified version of, 119
Binary mixture
of granular particles, continuous shape separation of, 31
Blanket algorithm
for ruggedness assessment, evaluation of, 255
Breakage rates
of anthractie during grinding in a ball mill, acceleration of, 227

Charge effects
in adsorption of polyacrylamides on sodium kaolinite and its flocculation, 77
Coagulant
inorganic; coagulation of red mud suspensions with, 27
Coagulation
of red mud suspensions with an inorganic coagulant, 27
Coal particle and spray droplet sizes
effect of, on combustion characteristics of coal–water mixtures, 127
Coal–water mixtures
effect of coal particle and spray droplet sizes on combustion characteristics of, 127
Cohesive strength of powders
measurement with a penetration test, 279
Combustion characteristics
of coal–water mixtures, effect of coal particle and spray droplet sizes on, 127
Comparison between modified beta and modified normal distribution function
for description of populations with finite size range, 157
Constitutive model
for consolidation of granular materials, 107
Continuous shape separation
of binary mixture of granular particles, 31
Control and instrumentation of a fluidized-bed drier
using temperature-difference technique: development of working model, 15

Density
fluid medium, effect of, on ball mill torque, energy distribution and grinding kinetics, 217
Description of normal, log–normal and Rosin–Rammler particle populations
by a modified version of the beta distribution function, 119
Determination of optimum impact-breakage routes for an ore, 3
Distribution function
beta, description of normal, log–normal and Rosin–Rammler particle populations by modified version of, 119
modified beta and modified normal; comparison between, for description of populations with finite size range, 157
Diagnostics of slugging
in fluidized beds, 285

Effect of coal particle and spray droplet sizes
on combustion characteristics of coal–water mixtures, 127
Effect of fluid medium density
on ball mill torque, energy distribution and grinding kinetics, 217
Effect of moisture
on density, compaction and tensile strength of microcrystalline cellulose, 161
Electroosmotic flow
in rectangular microelectrophoresis cells, 165
Evaluation of 'blanket' algorithm
for ruggedness assessment, 255

Flocculation
of sodium kaolinite, charge effects in adsorption of polyacrylamides on, 77
Fluidized bed(s)
diagnostics of slugging in, 285
gas, analysis of gas flow through erupting bubbles in, 45
gas–solid, prediction of entrainment from, 183
large jetting; motion of solids, jetting and bubbling dynamics in, 243
liquid–solid; heat transfer from a horizontal tube immersed in, 137
novel probe system for gas sampling from, 59
Fluidized-bed combustor
large-particle system, slugging; segregation in, 85

© Elsevier Sequoia/Printed in The Netherlands

Fluidized-bed drier
control and instrumentation of, using temperature-difference technique, 15
Fragmentation properties
magnesium stearate susceptibility of directly compressible materials as an indication of, 39

Gas flow
through erupting bubbles in a gas-fluidized bed, analysis of, 45
Gas-fluidized bed
analysis of gas flow through erupting bubbles in, 45
Gas sampling from fluidized beds
novel probe system, 59
Gas–solid fluidized beds
prediction of entrainment from, 183
Geometrical characteristics
of pore space in a random packing of equal spheres, 147
Granular materials
constructive model for consolidation of, 107
Graphite powder
mechanical behaviour of, 175
Grinding
of anthracite in a ball mill, acceleration of breakage rates of, 227

Hammer mills
size distribution analysis of ground wheat by, 235
Heat transfer
from a horizontal tube immersed in a liquid–solid fluidized bed, 137

Impact-breakage routes
optimum, for an ore; determination of, 3
Influence of particle shape
on size measured by light-blockage technique, 99
Instrumentation and control of a fluidized-bed drier
using temperature-difference technique, 15

Light-blockage technique
for measuring particle size, influence of particle shape on, 99

Magnesium stearate susceptibility
of directly compressible materials as an indication of fragmentation properties, 39
Measurement of powder cohesive strength
with a penetration test, 279
Mechanical behaviour of graphite powder, 175
Microcrystalline cellulose
from different sources, variations in properties of, 71
effect of moisture on density, compaction and tensile strength of, 161
Microelectrophoresis cells
rectangular, electroosmotic flow in, 165
Mixing in bins
quantification of degree of, 197
Modelling the operation of aerokinetic canals, 209
Moisture effect
on density, compaction and tensile strength of microcrystalline cellulose, 161

Motion
of solids, jetting and bubbling dynamics in a large jetting fluidized bed, 243

Nuclear magnetic resonance
fluid and frequency effects in surface area determination via, 261

Ore
determination of optimum impact-breakage routes for, 3

Particle populations
normal, log–normal and Rosin–Rammler; description of, by modified version of beta distribution function, 119
Particles
granular, continuous shape separation of binary mixture of, 31
Particle sample shape description
with an automated cascadograph particle analyzer, 271
Particle shape
influence of, on size measured by light-blockage technique, 99
Penetration test
for measurement of powder cohesive strength, 279
Polyacrylamides
charge effects in adsorption on sodium kaolinite and its flocculation, 77
Pore space
geometric characteristics of, in random packing of equal spheres, 147
Powders
measurement of cohesive strength of, with a penetration test, 279
Prediction of entrainment from gas–solid fluidized beds, 183
Probe system
novel, for gas sampling from fluidized beds, 59

Quantification of degree of mixing in bins, 197

Random packing of equal spheres
geometrical characteristics of pore space in, 147
Red mud suspensions
coagulation of, with an inorganic coagulant, 27
Ruggedness assessment
evaluation of 'blanket' algorithm for, 255

Segregation
in a slugging fluidized-bed combustor large-particle system, 85
Shape description
of particle samples with an automated cascadograph particle analyzer, 271
Shape separation
continuous, of binary mixture of granular particles, 31
Size distribution analysis
of ground wheat by hammer mill, 235

**Slugging**
in fluidized beds, diagnostics of, 285
**Sodium kaolinite**
and its flocculation, charge effects in adsorption of polyacrylamides on, 77
**Surface area determination**
via NMR: fluid and frequency effects, 261
**Variations in properties**
of microcrystalline cellulose from different sources, 71
**Wheat**
ground, size distribution analysis of, by hammer mill, 235
